AMENDMENT NO. 1  NOVEMBER 1984
TO
IS:9640 - 1980  SPECIFICATION FOR
SPLIT SPOON SAMPLER

Alterations

(Page 3, clause 0.3, line 2) — Substitute 'IS: 2131-1981*' for 'IS:
2131-1963*'.

(Page 3, clause 2.1, line 4) — Substitute ' for medium class in IS:
2102 (Part 1)-1980† for ' in IS: 2102-1969‡'.

(Page 3, foot-notes with '*' and † marks) — Substitute the following
for the existing foot-notes:

*Method for standard penetration test for soils (first revision).
†General tolerance for dimensions and form and position: Part 1 General tolerances
for linear and angular dimensions (second revision).

(Page 4, Fig. 1) — Substitute the following for the existing figure:

![Figure 1 Assembly of Split Spoon Sampler](image)

**Fig. 1** Assembly of Split Spoon Sampler

(Page 5, Fig. 3) — Substitute the following for the existing figure.

![Figure 3 Head](image)

**Fig. 3** Head

All dimensions in millimetres.

Indian Standard

SPECIFICATION FOR
SPLIT SPOON SAMPLER

0. FOREWORD

0.1 This Indian Standard was adopted by the Indian Standards Institution on 10 November 1980, after the draft finalized by the Soil Engineering and Rock Mechanics Sectional Committee had been approved by the Civil Engineering Division Council.

0.2 The Indian Standards Institution has already published a series of standards on methods of testing soils. It has been recognized that reliable and intercomparable test results can be obtained only with standard testing equipment capable of giving the desired level of accuracy. The Sectional Committee has, therefore, decided to bring out a series of specifications covering the requirements of equipment used for testing soils to encourage its development and manufacture in the country.

0.3 The equipment covered in this standard is used for conducting the in situ standard penetration test in soils covered in IS : 2131-1963*.

0.4 For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated, expressing the result of a test or analysis, shall be rounded off in accordance with IS : 2-1960†. The number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.

1. SCOPE

1.1 This standard covers the requirements of split spoon sampler used for conducting in situ standard penetration test in soils.

2. DIMENSIONS

2.1 Dimensions with tolerances of different component parts of this apparatus are given in Fig. 1 to 6. Except where tolerances are specifically mentioned against the dimensions, all dimensions shall be taken as nominal dimensions and tolerance shall be as given in IS : 2102-1969‡.

*Method for standard penetration test for soils.
†Rules for rounding off numerical values (revised).
‡Specification for allowable deviations for dimensions without specified tolerances (first revision).
3. MATERIALS

3.1 The materials of construction of the different component parts shall be as given in Table 1.

<table>
<thead>

*Specification for case hardening steels.
†Specification for cold rolled carbon steel sheets (second revision).
‡Specification for brass tubes for general purposes (second revision).
§Specification for mild steel tubes, tubulars and other wrought steel fittings : Part I Mild steel tubes (third revision).

4. CONSTRUCTION

4.1 The split spoon sampler shall be constructed as per details given in Fig. 1 to 4 and 6. The split spoon sampler may also be provided with a liner in the body as per details given in Fig. 5 in which case it is called as composite sampler.

Note — The composite sampler is not used for the determination of N values.
All dimensions in millimetres.

FIG. 4 SPLIT BODY (FOR USE WITH LINER)

All dimensions in millimetres.

FIG. 5 LINER

All dimensions in millimetres.

FIG 6. COUPLING
5. MARKING

5.1 The following information shall be clearly and indelibly marked on each component of the equipment:

a) The name of the manufacturer or his registered trade-mark or both;

b) Date of manufacture; and

c) Type (see 4.1).

5.1.1 The equipment may also be marked with the ISI Certification Mark.

Note — The use of the ISI Certification Mark is governed by the provisions of the Indian Standards Institution (Certification Marks) Act and the Rules and Regulations made thereunder. The ISI Mark on products covered by an Indian Standard conveys the assurance that they have been produced to comply with the requirements of that standard under a well-defined system of inspection, testing and quality control which is devised and supervised by ISI and operated by the producer. ISI marked products are also continuously checked by ISI for conformity to that standard as a further safeguard. Details of conditions under which a licence for the use of the ISI Certification Mark may be granted to manufacturers or processors, may be obtained from the Indian Standards Institution.
